
International Symposium on Automotive Technology & Automation

In automotive vehicles equipped with the electronic stability program ESP. The current trend is to use electronic systems and software in automobiles. This is because of the increasing demand for fuel efficiency, safety, and comfort. The use of mechatronic control systems in the design of automotive vehicles presupposes a good understanding of the development of technology in Europe. The 14th Mechatronics Forum International Conference, held in Florence, Italy, presented the latest advancements in the field. The conference focused on various aspects of the design, development, and testing of new-generation automotive mechatronic control systems. The key topics included optimization, identification, and prediction. The conference was a platform for experts from around the world to share their research findings and insights. The attendees included engineers involved in the design of automotive mechatronic control systems.
